**Subject:** comment on Gardner KS intermodal facility

As someone who lives downwind from the Gardner area, I am concerned that air quality will be negatively impacted by the planned intermodal facility. The environmental impact appears to have not been adequately assessed, and the general public not yet informed of the issues. Moreover, the air pollution that would be generated seems underestimated. The facility will likely be far more truck-oriented than P.R. materials would have us believe. That bias seems to permeate official reports on the facility.

A full Environmental Impact study should be conducted.
